- Convenient navigation and control with the easy to use scrolling wheels
- Favorites button to access your preset favourite stations easy and quickly
- Large display shows you all sorts of information such as; radio station, artist, time, latest news and more

### The easy way to listen to digital music anywhere in your home or office.

As the internet continues to have a bigger and bigger impact on our lives we now find all the popular radio stations broadcasting on the web! And they are joined by an enormous group of regional and specialist stations, which therefore can be heard across the world. Another trend is that we are collecting our own audio songs in our own libraries. We want to play these songs anywhere in the house: in the bedroom, the kitchen, the home office or the garage. Also more and more people start using RSS which is a popular way to pull in news and information from across the internet and allow web sites to easily push content to subscribers directly. Subscribers are instantly updated with the latest information and news from web servers. Freecom internet radio enables new ways of music listening and RSS/Blog information in one new device: MusicPal. Just put the Freecom internet radio MP3 streamer anywhere in your house and, with the push of a button, play thousands of radio stations or enjoy your own digital music library. Like the original radio we know, the internet radio is a device that will find it's way to millions of households in the next years. Again, Freecom has created a solution from a consumer's perspective, where convenience, design and quality are key factors. Keep it simple!
